Introducing the Undergraduate Research in Natural and Clinical Science and Technology (URN CST) Journal

The **Undergraduate Research in Natural and Clinical Science and Technology (URN CST)** [pronounced "earnest"] Journal is the leading open access, indexed, peer-reviewed publication for undergraduate research conferences. The journal accepts abstract submissions from planning committees globally, while striving to innovatively promote undergraduate research initiatives in the process.

Why is the URN CST Journal different than other undergraduate research journals?

As an undergraduate conference planner, you want your abstracts to be published in a research journal that offers its authors the best combination of **quality editorial standards** and **high article visibility**. Here are **8 reasons** why the URN CST Journal is the gold standard among undergraduate research publications:

1. **Open Access** – As opposed to subscription-based journals, all research articles accepted in the URN CST Journal are fully accessible and can be downloaded, read and cited by any academic in the world who has an internet connection.
2. **Prestigious and Peer-Reviewed** – The URN CST Journal only publishes conference abstracts that have been rigorously peer-reviewed by a planning committee. Furthermore, only select abstract authors - typically the winners of poster or oral competitions at a conference - are invited to publish a full-article in the URN CST Journal. Instead of relying on local experts or a single academic institution, the URN CST Journal's editors carefully review over these articles before calling upon principal investigators and graduate students around the world who are experts in the manuscript's specific topic area.
3. **Rapid Turnaround Time** – We understand that your abstract or article comes with the hope that you will be able to share your published research with a potential research placement or thesis advisor or a graduate or professional school committee, thus we endeavour to publish all conference abstracts before the date of the conference or reach a peer-reviewed decision on full articles and publish them within a single month.
4. **International** – While many undergraduate research journals are based out of/only accept submissions from one university, the URN CST Journal accepts submissions from undergraduate research conference planning committees internationally, calls on peer-reviewers internationally, and all published articles are available for an international audience.
5. **Broad and Multidisciplinary** – We value submissions from undergraduate students conducting research in any discipline within the natural and clinical sciences and technology. We understand that as an undergraduate student, you may choose to conduct research in multiple scientific disciplines throughout your degree, attend multiple undergraduate conferences or pursue a second and/or professional-undergraduate degree and the URN CST Journal serves as a platform to showcase all of your work.
6. **Indexed** – While many undergraduate research journals are difficult to find, lack proper archiving methods, and lack indexing, abstract books and articles published in URN CST Journal are easily found as a result of SEO optimization, archived securely on Open Journal Systems servers, and are indexed to Google Scholar once published. The URN CST Journal is also a CrossRef member, which means that all published abstract books and articles undergo content registration (metadata deposit) and receive their own digital object identifier (DOI). As a newly launched publication, future plans include also index articles in other academic databases including PubMed, Web of Science, and Scopus among others, meaning that even currently published articles will likely be later disseminated much more widely.
7. **Innovative** – The URN CST Journal team values the opinions of authors, reviewers and researchers. We welcome your feedback on how to improve our publication, but more importantly we want your thoughts on how we can support undergraduate research endeavours worldwide. For example, it is our hope that we will be able to offer URN CST Journal undergraduate research awards in the future.
8. **Social Media Promoted** – While it is increasingly common for research journals to have social media platforms, the URN CST Journal team takes it a step further by posting a message promoting your research article the day it is published on Facebook, Twitter and LinkedIn, thereby maximizing the visibility of your work.
